## Selective Weedkiller for Control of Broad Leaved weeds in Cereals, Undersown Cereals and Established Grassland

**Hyban-P** contains 150 g/l (13.8% w/w) mecoprop-p, 18.7 g/l (1.7% w/w) dicamba

- Economical herbicide for spring & winter cereals
- Very effective against polygonums, fat hen, bindweed etc.
- Use as a tank mix alternative to CMPP-P

**Hyban-P** may be applied to varieties of spring and winter cereals for the control of a wide range of annual and perennial weeds.

Spraying should be carried out in spring, from the 5 leaf stage onwards but before jointing has started (GS 31). Application after GS 31 may result in reduction in yield.

November 2007
