Why do we need **THYRAM PLUS**?

Seed crops are grown and handled with care to ensure that the seed available for next season's crop is free of weed seeds and is healthy. Despite this effort seeds are sown into a natural environment in which fungi such as *Pythium*, *Rhizoctonia* and *Fusarium* may proliferate. These fungi attack seeds and seedlings, resulting in seed rots and post emergence "damping off" of seedlings, and effects are most severe in cold, wet soils. Thiram protects the seed from these fungi during the critical emergence phases, so ensuring satisfactory establishment, in the absence of other pests.

Why you should chose **THYRAM PLUS**

THYRAM PLUS offers growers all the reliability borne from our experience with Agrichem® Flowable Thiram, but for seed processors it offers additional benefits:

- ∅ No mixing, leads to increased work rate
- ∅ No mixing, reduces hazards from pouring

With over 20 years of use, and on more than 20 different crop seed types Agrichem® Flowable Thiram which is non-coloured has given cost effective protection against "damping off" of seed and seedlings.

THYRAM PLUS and Agrichem® Flowable Thiram contain thiram.

Always read the label. Use pesticides safely.
