## Prelude® 20LF

for Linseed, Flax and Hemp

### UNBEATABLE DISEASE CONTROL

**Prelude® 20LF** is very effective in controlling the five major seed borne diseases affecting UK linseed. 100% control has been consistently achieved with infected seed at the disease levels below:

*Alternaria linicola* up to 72% infection  
*Fusarium avenaceum* up to 34% infection  
*Botrytis cineria* up to 37% infection

**Prelude® 20LF** also controls the less common seed-borne diseases *Colletotrichum lini* and *Phoma exigua*.

Where poor germination results from high levels of seed-borne disease, treatment with Prelude may increase the germination potential of the seed lot.

## *APPLICATION*

**Prelude® 20LF** is a free flowing liquid seed treatment containing a strong red dye to colour the seed. **Prelude® 20LF** is supplied with Seed Flow Aid to ensure seed is free flowing through seed drills.

## *RATES OF USE*

**Prelude® 20LF 2mls/kg** on linseed, flax and hemp.  
**Seed Flow Aid 2g/kg co-applied with Prelude® 20LF**

Successful establishment starts with good quality seed, disease-free and vigorous. Prelude® 20LF encourages establishment by controlling seed borne diseases.

Prelude® 20LF is offered on the understanding that seed to be treated is of satisfactory quality. Do NOT use on cracked seed, or where the moisture content is below 8%. Always treat seed as close to target drilling date as possible.

Prelude® is a registered trademark of BASF. Prelude contains prochloraz.

Always read the label. Use pesticides safely.
