**SEPIRET®** polymer coatings are a thin film of biodegradable polymer which encase the seed treatment, which improves the adherence of the seed treatment and the seed flow in the drill, thus increasing efficiency and giving the seed the best possible start to growth.

The use of **SEPIRET®** eliminates dust during handling, therefore providing greater safety for the user.

**SEPIRET®** is easy to apply through standard seed treaters and can be used alongside all seed treatments on all types of seed.

**SEPIRET®** is available in vast range of colours including Red, Blue, Green and Silver. Plus any original and exclusive colours available on request.
